Eleven of the trucks towed artillery pieces of about 150 mm caliber. the site of the pentoen bridge near Helmdorf on 15 october 1950 and reported that the bridge had been disassembled. About 250 meters south of the littenberg-Schweinitz road, between kilometer markers 4.7 and 4.9, in a small patch of woods an engineer unit with 25 trucks, ten of which were leaded with pentoens and the others with squared timber such as it is used for bridge construction. The noise of hammoring was heard from the woods. The imprints of tank tracks were seen leading from the highway between Sallin and Pruehlitz to the Elbe River. As the tracks led straight to the river, there probably was a bridge. Another bridge probably stood about 500 meters closer to Sallin, as this was indicated by the imprints of tank chains branching off from the highway and leading to the river. **	25

	6. Four AA guns of about 30 mm calibor were emplaced on the western bank of the Elbe River, about 400 meters upstream of the railroad bridge. Only the gun barrels projected over the mounds of protective earth. Eight trucks were parked beside a wooden shotter near the emplacement.
K 1	7.
X1	Comment. All observations made in the Seyda-Vittenberg area were in connection with the large-scale stream-crossing exercises held by elements of the Third 3ds 4ecz Army in that area in late Serva
X1	tomber and early October 1950 the exercises were conducted by headquarters units of the Third Odsecz
5X1	report also mentions the Gth and 7th Ads Tank Divs. Subject of the GOFG, the 2d AAA Div and the unidentified AAA Div of the Third Gds Lecz Army. The observation of heavy AA cun emplacements in
5X1	dicates that elements of the AAA divisions mentioned also participated in the stream-crossing practice. Comment. The exercises apparently ended prior to 15 october 1950.
